Active Directory Client Extensions 2016

Active Directory Client Extensions 2018

MS Windows functionality improved !

SYNERGIX ADCE (Active Directory Client Extensions) for Microsoft® Windows™ is a unique software solution that bridges major gaps in Windows Operating System. It delivers unsurpassed desktop experience to Windows Users and helps the IT organization improve their SLA. ADCE addresses security concerns such as PtH and helps organizations meet their PCI DSS compliance requirements. Administrators can enable the *Built-In Administrator Account Password Management* feature to meet their IT Security Compliance requirements and save the administrator account passwords in the Enterprise vault.

- **Enforce password policy changes on VPN users**
 - Prompt VPN users to change password upon password expiration*
 - Synchronize VPN users cached credentials with domain credentials*
- **Manage WiFi Adapter**
 - Always use LAN connection when docked*
 - Restore WiFi connection when undocked*
 - Release WiFi Adapter IP Address to DHCP pool*
 - Scavenge WiFi Adapter IP Address from DNS*
- **Execute user login script in cached credential mode**
- **Map user home drive to user home path, in cached credential mode**
- **Update group membership dynamically for computer objects and user objects, without requiring to logoff / logon or to restart. Restarting a remote computer, when disconnected from the corporate network will never update the computer group membership; ADCE solves this problem.**
- **Consolidate and manage GPO**
- **Manage GPO refreshes on VPN connected PCs**
 - Apply Group Policies as soon as VPN connection to corporate network is established*
- **Organize computer objects in Microsoft® Active**
 - Maintain domain membership, even over VPN connections. ADOM is sysprep on steroids !*
 - Tag computer objects by updating description field (customizable), managedBy, location and other attributes*
- **Assure security compliance**
 - Auto expire dormant and inactive accounts*
 - No need to consolidate VPN connector logs and AD security logs, VPN user (even cached credentials) is logged in domain controller security log*
- **Improve Return on Investment**
